THANK YOU FOR CHOOSING JAEWONCNC IROAD VEHICLE RECORDER

This manual contains how to operate product and guide you to use correctly, Please read carefully before using product.

Please read carefully and follow the instructions given. This manual will guide you through on the instructions for the device.

■ GUARANTEE AND SUPPORTING

- Available for download from the website at <http://www.iroadkr.com>
Global website(Global - www.iroadkr.com / Singapore - www.iroad.sg / HongKong - www.iroad.hk / Malaysia - www.iroad.my)
- Dedicated viewer, latest firmware and other product information are available for download from the website.
- JAEWONCNC is not responsible for any problem that occurs if the device is used or obtained illegally.
- Though this product records and saves footages in the event of accident, it does not guarantee that every single accident scene is fully recorded.
- If the impact on the vehicle is minor, the accident scene may not be recorded as the impact sensor is unable to detect minor ones.
- The recordings obtained from the product might be used as a proof of accident. However, JAEWONCNC will not be responsible for any gain or loss caused by the accident.

■ COPYRIGHTS AND TRADEMARK

- This manual is legally protected by copyrights, all copyrights reserved to JAEWONCNC.
- This manual is the property of JAEWONCNC, no one is allowed to attempt to make an unauthorized copy, edit and/or translate the manual
- IROAD is the trademark of JAEWONCNC. JAEWONCNC has rights to IROAD (Name, Design, Brand image)
any unauthorized use of IROAD will result in prosecution.

| 2. PRECAUTION

■ VOLTAGE RELATED ISSUES

- Please make sure to use recommended voltage input.
Otherwise, It may cause the product not functioning well or even overheating which may damage the vehicle or the product itself.
- Do not disassemble or modify the product. Or else, it will be deemed as the user's fault and warranty will be voided.
- Make sure that the fuse cable is not being cut or damaged when attaching other electronic gadgets on the vehicle. Otherwise, it may cause product failure, damage to the vehicle or user itself. Recommended to use qualified uninterrupted fuse cable produced by JAEWONCNC.
- Unauthorized installation of the uninterrupted fuse cable may cause malfunctioning on the device. Different types of vehicle will have different kind of installation ways. (Please contact a professional engineer if you required any help regarding installation)

■ INSTALLATION

- Do not mount Vehicle Recorder in such a way that might block your vision while driving as it may cause an accident.
- Connect all the cables provided into the correct ports. Wrong connection or input may cause the product to malfunction.

■ THE RIGHT USE

- Do not connect to the device while driving (Viewing live recording etc), as it may causes serious accident.
(Please connect your device when the vehicle is stationary.)
- Do not apply significant pressure on the product - especially the lens. Otherwise, it may cause product to malfunction.
- Keep the product away from flammable and combustible liquids which may cause fire hazards.
- The quality of the image(s) captured could deteriorate when:
 - a. Driving during night time with bad surrounding area light.
 - b. The vehicle is passing through a tunnel
 - c. Temperature of the device exceeds optimal operating temperature
- The quality of the video recording might be affected due to the tinted, dirt or water stain on the wind screen.

| 3. PRECAUTION

■ MANAGEMENT

- Do not operate the device when being exposed to direct sunlight for a long period of time. Otherwise, it may cause device to malfunction.
- Please check the memory card monthly for the recording image and also reformat the memory card to prolong the lifespan.
- Do take note whether is there any error messages being prompted by the device and make sure to check that the device is working normally before and during driving.
- Do not remove the memory card / power cable during firmware update. As it may cause the device to malfunction or loss of data

■ MEMORY CARD AND PRECAUTION

- Memory card has limited write cycle as different memory will reach its lifespan differently. Errors will occur when the lifespan of the memory card reached its limited usage such as unable to power up device or error message that cause the device to restart. Memory card lifespan depend on the times it read/write and also if the memory card is usage under high temperature or misuse of memory. (Remove memory card without shutting down the device, etc)
- The device must be switched off when ejecting the memory card. Otherwise, the memory card may be corrupted or the data stored might be erased.
- When not in use, store the memory card in the case provided. Avoid keeping under hot or humid environment as it may cause damage to the memory card.
- **The use of a Genuine IROAD memory card is recommended as normally 3rd party memory card is for storage and not recommended for running 24/7 overwriting.** There will be a 6-month warranty period from the date of purchase. It may cause to reduce life cycle of memory card if using with constant power cable.
- The lifespan of the memory card will be reduced due to constant writing and reading of data.
Therefore, to ensure the functional stability of the memory card, please format it at least twice a month and also check if the device is working normally.
- Product only permits the recording of files on X10 program. Any other files will be deleted or even damage the memory card.
(Please use the SD card for the product only, otherwise it will be deleted.)
- At first usage, it takes up to 5 minutes for the memory card to format before the device starts operating. (Depending on the memory capacity)
Please do not remove the memory card while the device is running as it will cause damage to the memory card and the device.
(Shut down the device before taking out the memory card)

| 4. PRODUCT OVERVIEW

IROAD **X10**
QUALIFIED VIDEO RECORDER OF VEHICLES

2CH High Definition

Front : 4K/UHD 3840x2160p 30 frames per second
Rear : Full HD 1920x1080p 30 frames per second

OBD SCANNER

OBD scanner provides real-time data and to diagnose and fuel economy statistics in your vehicle via smartphone.

Wi-Fi Support

Real Time Image (Live view recording) and playback is supported via Wi-Fi. Customize settings and automatic updates are supported.

ADAS

Advanced Driver Assistance System
LDWS, FCWS, FVDW

SAFEGUARD User's Car Battery

Automatic LBP cut off voltage function is embedded in the device to ensure the safety of the car battery.

Remarkable hardware supporting high performance

Front 8.3M pixels, Rear SONY Exmor Image Sensor

Memory Card Automatic Recovery Function

In case any error occurs, data is automatically recovered.

X-VISION

Better recording with brighter and clearer images even in low light environments.

Variable Recording Mode

Automatic Parking Mode and Motion Detection function
Impact, 24 hours Recording Mode

High Intensity Security LED

High intensity LED makes it possible to check outside whether product is working.

Voice Recording & Voice Guidance

High Quality Sound Recording
Built-in Speaker with Clear Voice Guidance

External GPS

Driving speed will be display on the recording playback.
Location of the recording will be able to view via IROAD PC Viewer.

Dedicated PC Viewer & Smartphone Playback

Setting & various functions on IROAD PC Viewer and Smartphone.
Playback functions are available for both PC and Smartphone.

Firmware Update

Continuously improving the software and maintaining stability of the products.
Easy & simple when updating firmware through Smartphone directly or from our website www.iroadkr.com

7. SPECIFICATION

Model	IROAD X10
Image Sensor	Front:8.3M Pixels Image Sensor, Rear:SONY Exmor(IMX323) Image Sensor
Resolution/Frame/Viewing Angle	Front:3840x2160 30fps, Rear:1920x1080 30fps / Front:165°,Rear:145°
Wi-Fi	Wi-Fi supported - Smartphone playback/settings, Firmware automatic upgrade
Wi-Fi Button	Enable connection via Wi-Fi "Standby mode for registration" for new users.
ADAS	LDWS, FCWS, FVDW
OBD2	Real-time data and to diagnose and fuel economy statistics in your vehicle via smartphone.
Audio Input	Embedded MIC
Video/Audio Compression	MP4 / ADPCM
Vibration Sensor	3-axis acceleration sensor (Start recording when it senses external impact)
External GPS Sensor	Google map sync, inform the location and travelling speed of the vehicle.
Storage Medium	Micro SD 16GB ~ 256GB (MLC Class10)
Recording Mode	Driving, Event(Impact), Parking(Timelapse, Motion detection)
Uninterrupted Power	Low voltage cut-off, overheating prevention is embedded
Power Supply / Power Consumption	DC 12V ~ 24V / 3.0W
Operating Temperature/Humidity	-20 ~ 70°C (Storage temperature : -30 ~ 90°C) / 10 ~ 95%
LED	Security LED
Viewer	Win7, Win8, Win10 (64Bit), Mac (OS X 10.7 64Bit or higher) (Latest update, 4K resolution and HDCP 2.2 display support, Intel 7 Core Processor and above or 4K support graphic card)
Application	IROAD App (Android 6.0, iOS 10.0 or higher version)

| 8. INSTALLATION

IROAD **X10**
QUALIFIED VIDEO RECORDER OF VEHICLES

■ Mounting a cradle for front camera

- Align the mounting slot (2) with the cradle (1) and slide to the side to lock the device.

■ Product Installation

1. Wipe the windscreen with soft cloth to remove any stains or dust where the product will be attached on.
2. Remove the protective film from the adhesive tape on the front/rear camera before installing it.
3. Connect the rear cable into both front and rear camera port.

Please make sure the rear cable connected to both side of the rear sockets are secured after installation.

■ Placement for Dash Camera (Front/Rear)

- Use dry cloth to wipe the area on the windscreen where the device will be installed on it.
- Make sure to install the device where the vision will not be blocked during driving.

| 9. INSTALLATION

■ Product Installation

4. Connect power cable to DC-IN slot

5. At the other end of the cable, do connect it to the vehicle fuse box or cigar jack power.

Procedure on installation for uninterrupted fuse cable,
please refer to the website www.iroadkr.com or follow the instructions stated on page 10

6. Make sure that the product is operating normally

■ Connect External GPS

When Connect External GPS into the GPS port which can be found on the top of the device, user will be able to access the GPS function which provides the vehicle speed, location and other additional information.

Please make sure to have some distance between the device (Front Camera) and the GPS to prevent any interference issue.

■ Inserting Memory Card into the device

• Make sure to insert the memory card in the correct way.

Once the memory card is being inserted into the memory card slot, user will be able to hear a “click” sound.

At first usage, it takes up to 5 minutes for the memory card to format before the device starts operating. (Depending on the memory capacity)

Recording starts with a voice guidance mentioning “Start recording”

| 10. UNINTERRUPTED FUSE CABLE

■ Uninterrupted fuse cable (LBP function)

The LBP function will prevent the car battery from continuously discharging during parking mode when the device detected the voltage dropping below the preset voltage.

(If you park for a long time, battery discharge may occur depending on the vehicle condition.)

■ How to Install Uninterrupted Fuse Cable

- 1 Find the correct fuse terminal using electric tester to locate the fuse box of the vehicle.
- 2 [VCC]Line (Yellow Line): Make sure engine is off and connect to a current flowing fuse.
[ACC]Line (Red Line): Connect to the fuse which the electric current is not present.
- 3 Connect the GND wire to the vehicle ground iron part.
Do not connect the wire on fuse that is not working or having voltage leak.
- 4 Connect the power cable to test whether the product is operating. Once confirmed, organize the wiring cables neatly.

- User is advised to check the wiring before doing any installation.

There might be a switch of (VCC, ACC, GND) wire color. Please do contact professional technician if you required any help on installation.

- Please do switching test (Driving mode <-> Parking mode) before wiring.

| 11. OBDII SCANNER

■ What is OBDII?

OBDII (On-board diagnostics) is an automotive term referring to a vehicle's self-diagnostic and reporting capability. It provides real-time data in addition to diagnostic trouble codes(DTC) and allows to identify and diagnose malfunctions in your vehicle by connecting the device to the OBDII connector.

Please connect the wiring in the correct order. Otherwise it may cause product or vehicle malfunction.

Please use only IROAD genuin OBDII cable. It may cause defects when try to other products.

■ How to connect OBDII

- 1 Connect OBDII cable to devcie with vehicle engine off.
 - 2 Connect power cable of OBDII to device.
 - 3 Check the OBDII port. Typically, the OBDII port is located within 60cm of steering wheel such as dashboard or fuse box.
The location of the OBDII port may vary depending on vehicle. Please follow up instruction manual or vehicle manufacturer for exact location.
 - 4 Connect the OBDII connector to the OBDII port. Before finishing installation, make sure normal operation.
- Before connecting to the vehicle OBDII port, make sure to connect OBDII and device first.

| 12. PRODUCT OPERATION

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Product Operation

Power ON	<ul style="list-style-type: none">- All LED will be turned on when the engine is on.- There will be a voice guidance to assist the user once the device starts recording.- GPS LED light will be off when there's no GPS connection.
Power OFF	<ul style="list-style-type: none">- All LED will be off when the engine is off or the power cable is disconnected.
External GPS	<ul style="list-style-type: none">- While external GPS is being connected, the GPS LED light will flicker. (GPS LED light will be constantly on when connected to the satellite.)- Please check the connection again if the LED light is not on despite having installed with external GPS.
Wi-Fi User Registration	<ul style="list-style-type: none">- Press the Wi-Fi registration button on the device, there will be voice guidance (Standby mode for registration). User will need to select the product on the list that they wish to register.- The "Standby mode registration" will be deactivated after 2minutes.

| 13. BUTTON SCENARIO

· Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Button Scenario 1

Power OFF	<ul style="list-style-type: none">- Press and hold the button A for 5 seconds long.- “Shut down the system.” will be signaled, and the device will be powered off.
Power ON	<ul style="list-style-type: none">- Press and hold the button A for 5 seconds long.- “Start recording.” will be signaled, and the device will be powered on.
Wi-Fi OFF	<ul style="list-style-type: none">- Press the button A for 1.5 seconds long. “Ding” sound will signal.- “Wi-Fi power is off.” will be signaled, and Wi-Fi connection will be unavailable.
Wi-Fi ON	<ul style="list-style-type: none">- Press the button A for 1.5 seconds long. “Ding” sound will signal.- “Wi-Fi power is on.” will be signaled, and Wi-Fi connection will be available.

※ When 'Wi-Fi OFF', the consumption power is reduced by 0.3w and the device operating time is increased by 10%.

※ 'Wi-Fi ON/OFF' function allowing Users to turn Wi-Fi power on/off. Do not confuse it with 'Wi-Fi registration button'.
When connecting to a smartphone, you must press 'Wi-Fi Registration Button'.

※ Smartphones that have already been registered previously, Users do not have to re-registered even if the Wi-Fi on/off function is used.

※ Default settings - Wi-Fi function is ON.

| 14. BUTTON SCENARIO

· Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Button Scenario 2

Wi-Fi Stand-by Mode ON	<ul style="list-style-type: none">- Press the button B shortly. “Ding-dong” sound will signal.- “Stand-by mode for the registration.” will be signaled, and Wi-Fi connection can be initiated.
Wi-Fi Stand-by Mode OFF	<ul style="list-style-type: none">- Press the button B shortly. “Ding-dong” sound will signal.- “Stand-by mode for the registration is released.” will be signaled, and Wi-Fi connection cannot be initiated.
Audio Recording OFF	<ul style="list-style-type: none">- Press the button B for 3 seconds long. “Ding-dong” sound will signal.- “Stop recording the voice.” will be signaled, and will be recorded without audio.
Audio Recording ON	<ul style="list-style-type: none">- Press the button B for 3 seconds long. “Ding-dong” sound will signal.- “Start recording the voice.” will be signaled, and will be recorded with audio.

| 15. RECORDING MODE

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Recording Mode

Normal Recording	<ul style="list-style-type: none">- Once the power is connected, the device will boot up and start recording.- Security LED flickers once every 2 seconds.
Event Recording	<ul style="list-style-type: none">- Once the device detects any shock (REC LED light will flickers)- It will be recorded under Event recording mode.- It will switch back to Normal recording mode after the Event recording time is finished.
Parking Recording	<ul style="list-style-type: none">- Once the engine is turned off (ACC line), the device will automatically enter parking mode after 5 seconds.- Parking record with 10 frames per second in order to capture more recordings.- Security LED flickers every 1 second.- Switch to Normal recording mode when the user starts to drive.
Motion Detection	<ul style="list-style-type: none">- Once the device detects any movement within 3 meters range, it will start to record.- Security LED light will start to blink faster.- Once there is no movement, it will switch back to parking recording mode.

| 16. VOICE GUIDANCE

· Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Voice Guidance 1

Start recording.
Shut down the system.
Stand-by mode for the registration
Complete the registration.
Stand-by mode for the registration is released
No Wi-Fi dongle
Users connected.
User access disabled.
Wifi power is on.
Wifi power is off.
Already registered smart phone.
GPS connected.
Recording does not have enough available. Please check overwriting setting.
User's searching starts so, recording is paused.
Start recording.
Driving mode to start recording. Safe driving.
Video is not being entered.
Records in parking mode.
Impact event has occurred during parking.

| 17. VOICE GUIDANCE

· Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Voice Guidance 2

Shut down the system to protect the battery of car.
Restart the system to protect the battery of car.
Rear camera is connected.
Rear camera is disconnected.
Rear camera is invalid.
Video of the rear view camera is not being entered.
check the rear camera connection.
Switch to standby mode.
Setting changed and reboot.
Press the Wi-Fi button to register a smart phone.
"Reboot because of the damaged memory card. Please replace the memory card if this occurrence continues."
On formatting the memory card. Please wait.
Memory card is damaged and can not be recorded.
No Memory card.
Program file is corrupt and can not be installed.
On installing the program. Do not turn off the power.
Stop recording the voice.
Start recording the voice.

| 18. VIDEO FOLDERS IN SD MEMORY CARD

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

Config

Data

Event

Update

Viewer

Config System Folder

- Log.txt : Saved device status
- System.cfg : Saved device settings
- Version.ini : Saved version information
- obd.txt : Saved the vehicle information. (Option-OBD Scanner is installed)
- obd_bin : Saved operation status (Option-OBD Scanner is installed)

Data Normal (Driving) Recording Folder

- Normal recordings are being saved into this folder. The number of files being saved depends on the capacity of the memory card.

Event Event(Impact) Recording Folder

- Recorded data of events (Impact, Parking, Motion) recording will be saved into this folder.

Update Firmware Folder

- Allow user to manually update the device firmware using the update file downloaded from our website.

Viewer Viewer Setup Program

| 19. FIRMWARE UPDATE

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Automatic Update via PC Viewer Program

- 1 . Application will prompt an update message when the PC viewer program is being installed for the first time as shown on the picture above.
- 2 . If the user selects the upgrade button, it will automatically download the upgrade file into the memory card.
- 3 . Make sure the power cable is disconnected from the device first before inserting the memory card.
- 4 . Once the memory card is being inserted into the device, connect the power cable and start the engine.
- 5 . The device will format by itself and will prompt a message "Re-installing the program, please do not turn off the power."
- 6 . Once the device is being rebooted, this means that the update is done.

| 20. FIRMWARE UPDATE

· Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Automatic Update [Wi-Fi]

[Message Pop-up]

1. Confirm the device is properly registered
2. Message Pop-up will be appeared when press the "Firmware Update" button on IROAD Application
3. Press "OK", Update will begin automatically
4. Please do not turn off smartphone and product while updating
5. once update completed, the device is rebooted and restart recording

· Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Manual Update

Update

1. Disconnect the power cable.
2. Remove the memory card from the device and insert it into the card reader. Afterwards, insert the card reader into the PC.
Once it is done, copy the downloaded firmware file into the memory card under the folder named "Update".
3. Insert the memory card back into the device.
4. Connect the power cable back into the device (DC-IN) port.
5. Turn on the engine. Make sure the engine is on.
6. The device will update and format by itself and the LED light will start to flicker.
It will then prompt a message "Re-installing the program, please do not turn off the power."
7. Once the update is done, the device will reboot and starts recording.

| 22. INSTALLATION & RUNNING THE VIEWER

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Program Installation

1. The viewer software is not pre-setup in the memory card.
2. Connect power to the product after inserting Micro SD card. Recording time could differ depending on the capacity of SD card.
3. Take 3~5 minutes to initialize and create the file system when first use.
(All LED flicker while initializing, There will be REC on when it starts recording after finishing) Insert the SD card into PC.
4. Run viewer.exe which is saved in the memory card.

viewer.exe

■ Running the Program

1. Confirmation pop-up window appears if there is internet connection as picture shown.

If there is no internet connection, IROAD VIEWER will run directly.

2. Press "run a viewer" icon to start viewer program.

3. Open File - Click the icon  in the viewer to browse folder window as shown in the picture. Select removable disk, press "OK" button.

- ⑦ FCWS Sensitivity

※ ADAS configuration change is available only when there is GPS connection, otherwise it won't be applied

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Settings - Event

EVENT SETTINGS

- ① Impact detection ON/OFF
- ② Impact sensitivity
- ③ Parking Mode ON/OFF
- ④ Parking Mode Sensitivity
- ⑤ Motion detection ON/OFF
- ⑥ Post-Impact recording time
- ⑦ Memory allocation setting
 - Allocate memory capacity between event and normal recording storage folder.
 - Once the percentage changed, device is rebooted after format

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Settings - System

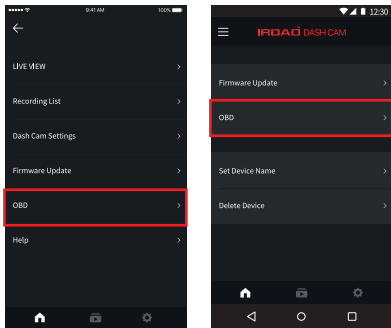

SYSTEM SETTINGS

- 1 Info - Product information
(Driver, Car, Firmware version, Model etc..)
- 2 Low Battery Protection
 - Product will be shutdown once battery voltage reaches preset level
 - This function is important for using parking mode in order to prevent battery discharge
- 3 Security LED On / Off
- 4 Shutdown in high temperature ON/OFF
 - Cutoff the power automatically once temperature is reached 75°C while parking mode to protect product and vehicle
- 5 Parking Mode Timer
 - Product will be shutdown automatically after preset parking time

| 45. OBDII SCANNER APPLICATION

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ iOS / Andorid

For models with OBD support, connect to "IROAD" app and after completed synched, OBD Button is activated on iOS(Upper left menu button), Andorid(Upper right menu button)

※ Real-time vehicle information (OBD Scanner) is only supported in the latest application via smart app3

For more information, please visit to IROAD website (www.iroadkr.com)

46. OBDII SCANNER APPLICATION

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ OBD Setting

STEP 1

When running the OBD tap first, please input vehicle information settings

- ※ Please enter the same vehicle information as the information on your vehicle registration card. If you have entered wrong information, you will not be able to verify the exact vehicle status and information.
- ※ The OBD does not work when it is set to different vehicles more than 7 times due to vehicle replacement or other reasons. There is no limit to the same vehicle.
- ※ For more information, please refer to the supported vehicles and support items registered on the IROAD homepage.

STEP 2

Please enter Vehicle Manufacturer, Vehicle Models, Years, Fuel Type, Displacement, Official Fuel Efficiency, Maximum Capacity, Vehicle Lengths, Vehicle Class in order to save.
(Please enter the information of actual vehicle correctly)

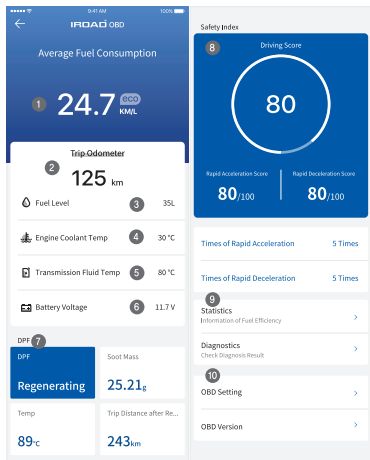

- After saved settings, please identify information to be saved.

| 47. OBDII SCANNER APPLICATION

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Real-time Vehicle Information

Real-time Vehicle Information

- 1 Average Fuel Consumption
- 2 Trip Odometer
- 3 Fuel Level (L) or EV (Electric Vehicle) Battery (%)
- 4 Engine Coolant
- 5 Transmission Fluid
- 6 Battery Voltage
- 7 DPF
 - Identify DPF Status, Regeneration Status, DPF Temperature, DPF Regeneration distance
- 8 Safety Index
 - Identify safety index as points to reflect how many times rapid acceleration, deceleration
- 9 Statistics and Diagnostics
 - Identify driving statistics and list of vehicle diagnostic
- 10 OBD Re-Setting and Version
 - Set vehicle class or identify OBD version information

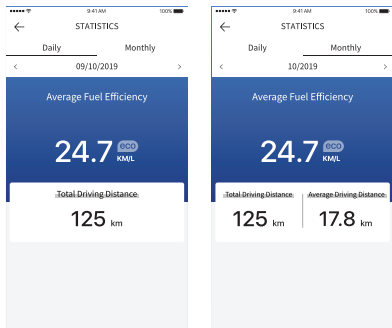

※ Depending on vehicle class (Trim) and options, there may be some restrictions on OBD support functionality.

※ After OBD installation, average fuel consumption may be random variation.

48. OBDII SCANNER APPLICATION

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Statistics

Driving Statistics (Daily/Monthly)

Identify daily / monthly driving statistics. (Total Trip Odometer, Average Driving Distance, Fuel Consumption)

- The fuel consumption of the actual vehicle may differ from the fuel consumption on the app screen when users drive a short distance.

• Menu and function can be changed without prior notice by sudden firmware upgrade or product enhancement.

■ Diagnostic

Please press "Diagnostic" button to identify information of vehicle.
Identify diagnostic information of vehicle.

※ Vehicle diagnostic function is provided for reference only.

If the vehicle diagnostics result revealed error code, please get detailed checks from car repair shop.

■ Device unable to power up due to cable issue

1. Check if the fuse cable is connected to the correct fuse.
2. Only use authentic fuse cable for IROAD device.
3. When using cigar jack to power up the device, the device will be turned off when the engine is off.
4. Recommended by connecting fuse cable in order to access parking mode.

■ Device keep restarting due to memory card issue

1. Make sure the device is power off before inserting the memory card into the device.
2. If the device prompts any error message regarding the memory card, try reformatting the memory card and insert back to the device and test again.
3. User is required to insert the memory card into the memory card reader before inserting into the PC.
4. Make sure to check whether the memory card reader is faulty

■ The quality of recorded video is not clear

1. Check if there is any dust or dirt on front and rear camera lenses.
2. If windscreen is tinted, it may affect video quality.
3. Surrounding light may affect the video quality

■ No power after parking. (LBP)

1. Power will be cut-off to safe guard the car battery when the voltage reaches the pre-set voltage.
2. Battery discharging period might get shorten due to the battery condition / the motion recordings recorded.

■ Unable to view playback recording

1. Recording can be playback using IROAD PC viewer and IROAD App on smart phone.
2. 3rd party players may not fully support the recording video format.
3. If error occurs during recording, contact IROAD After-sale Service for further enquiries.
